

1 **ABSTRACT OF THE DISCLOSURE**

2 Disclosed is lottery service system and method utilizing an integrated circuit card, by which
3 a user can utilize not only a communication service, but also an additional lottery service. The
4 system includes a server, and a terminal. The terminal has a card reader section, a card verification
5 section, a display section, an input section, a memory section, and a first communication section
6 interconnected to a network. The server has a second communication section interconnected to the
7 network, a lottery ticket sale information storage section, a lottery ticket information generation
8 section, a cipher algorithm section, a lottery ticket purchaser verification section, and a control
9 section. The method includes: a card verification step, in which an availability of the card is verified
10 by means of a card verification key stored in the card; a lottery ticket selling service step, a kind of
11 the lottery service is confirmed, and a lottery ticket is sold according to the kind of the lottery ticket
12 service selected by the user; and a winnings payment service step, in which a genuineness and a
13 winning of the card are confirmed, and then winnings are paid to the user.
